SSL Libraries Error

12/25/2016 10:35 PM - Backer fiore_1414

Status: Investigating Priority: Normal Assignee: Category: Steam or Launcher: Launcher	
Description While trying to download/install beta, I get to about 4% and then receive the following error message: An error occurred while loading SSL libraries. This could mean there is a problem with system configuration. I've seen this logged as "Bug 416" and that it is resolved but I cannot see what the resolution was. Can you please tell me how to resolve this issue? I have checked my system to make sure that I meet all of the minimum system requirements.

This issue is know but it never was really resolved.

Except this possible solution [#497](#), try it and if does not work we will try something else.
